Results. Among 18 654 findings, autopsies helped to identify 61.3% (11 433 of 18 654), postmortem CT helped to identify 76.0% (14 179 of 18 654), and postmortem CT angiography helped to identify 89.9% (16 780 of 18 654; P < .001). Postmortem CT angiography was superior to autopsy, especially at helping to identify essential skeletal lesions (96.1% [625 of 650] vs 65.4% [425 of 650 ...

Postmortem CT Angiography Compared with Autopsy: A ...

Postmortem CT angiography is a minimally invasive procedure that allows the diagnosis of vascular lesions without the disruption of the anatomic structures that is inevitable during classic autopsy; because of this fact, postmortem CT angiography has the potential to prevent the loss of physical evidence in a forensic investigation.
