### Best Image Formats for the Web – High-Quality, Small File Size

The standard resolution for web images is 72 PPI (often called “screen resolution”). At that size, the pixels you see on the screen are all the pixels there are; an image that’s 4” long at 72 PPI will take up about 4” of your monitor.

### What Resolution Should Your Images Be?

When it comes to digital, people are often under the impression that the resolution should be set to 72dpi, but this is only a legacy value and it is image dimensions that are more important, because you are fitting a grid of pixels (your image) into a grid of pixels (the screen).

### **The ultimate guide to image resolution | Creative Bloq**

So for example, a typical image on a website or blog might be 795×300 pixels. Resolution for web images: Left over from the world of print, resolution is the quality or density of an image, measured in dots per inch (dpi). A professional printer might require images to be at least 300dpi.

### **How to Optimize Images for Better Web Design & SEO | Jimdo**

If you've been around computers and digital images for a while, especially if you're a web designer or a photographer publishing your photos online, you've no doubt heard it said that the correct resolution for images displayed on the web, or on computer screens in general, is 72 pixels per inch (ppi). You may have even heard it said that while 72 ppi is correct for images displayed on a Mac, a Windows-based PC needs the resolution set to 96 ppi.

### **The 72 PPI Web And Screen Resolution Myth**

So what is the minimum resolution you should cater for? Designing a website no wider than 1024 still had a lot of merit, with nearly 10% of visitors running 1024×768. Having said that, you really can do a lot with a few hundred extra pixels.

### **Best size for web design • Most common screen resolution(s)**

Typically, large high quality images should be kept between 100K and 60K. Smaller images should be closer to 30K and lower. The resolution of the image dictates its clarity. The higher the resolution, though, the larger the file size, so you have to make a compromise between quality and file size.

### **Image Size and Quality | WordPress.org**

At the beginning of 2012, most web users had a screen resolution of either 1366 × 768, 1024 × 768, or 1280 × 800. This has changed quite a bit today, however, and goes to show just how quickly optimal resolution sizes will change over time for web design.
