Reinforced Concrete Structures Design According

Reinforced concrete structures are normally designed according to rules and regulations or recommendation of a code such as ACI-318, CEB, Eurocode 2 or the like. WSD, USD or LRFD methods are used in design of RC structural members. Analysis and design of RC members can be carried out by using linear or non-linear approaches.

In the design of reinforced concrete beams, if the design ultimate moment is greater than the ultimate moment of resistance i.e. $M_{Ed} > M_{Rd}$, then compression reinforcement is required. Provided that $d/2 \leq x \leq 0.38d$ (i.e. compression steel has yielded) where $d/2$ is the depth of the compression steel from the compression face and $x = (d - z)/0.4$
